Projects

Reading Tracker — Docker, Python, Django, JavaScript, HTML, CSS

- Designed and built a Reading Tracker website using Django
- Enabled users to log and track their reading progress, add books, and set reading goals
- Ensured high-security standards by implementing user authentication and authorization
- Employed Docker for efficient containerization
- Hosted the website on Google Cloud Platform to guarantee 24/7 availability and reliability
- Delivered an accessible and secure platform that met users' reading needs

To-Do List — Docker, Python, Django, HTML, CSS

- Developed a feature-rich Todo List web application using Django
- Included user authentication and real-time updates for an enhanced user experience
- Implemented a responsive and intuitive user interface with HTML, CSS, and JavaScript
- Utilized Docker alongside Google Cloud Platform for data storage, server management, and scalability
- Delivered a dynamic and user-friendly To-Do List application with real-time updates and a responsive UI

Tab Saver Chrome Extension — JavaScript, HTML, CSS

- Developed a Chrome browser extension using HTML, CSS, and JavaScript
- Enabled users to save and organize their open tabs with a single click
- Implemented functionality to save and manage open tabs with ease
- Leveraged Chrome extension APIs for robust tab data management
- Provided users with a valuable tool to improve productivity and declutter their browsing experience

Skills

Languages: Python, JavaScript, HTML, CSS

Frameworks: Django, Flask

Technologies: Google Cloud Platform (GCP), Docker, PostgreSQL
